- Transparent with no shiny residue
- Odourless
- Non-greasy, fast-drying formula. Apply & go!

Can be applied immediately post-procedure/treatment:
- Laser procedures
- Micro-needling
- Dermabrasions
- Burns*
- Chemical peels
- Post-surgical care

The updated International Clinical Recommendations on Scar Management advocates the use of silicone gel as first line therapy for the prevention and treatment of abnormal scars such as keloids and hypertrophic scars.1

Discover the first-line therapy for post-procedure care and scar management.

Directions for use:

1. Ensure that the treatment area is clean and dry.
2. Apply a very thin (paper thin) layer of CytoDerma™ evenly over the treatment area.
3. For best results, CytoDerma™ should have continuous contact with the skin.
4. Once dry, CytoDerma™ can be covered with sunscreen and/or cosmetics.

Apply once or twice daily, or as advised by your health care professional. If CytoDerma™ has not dried within 3-4 minutes, gently remove any excess with a tissue.

- CytoDerma™ should not be placed in contact with eyes, mucous membranes, open wounds and third-degree burns.
- CytoDerma™ should not be applied over other skin treatments without the advice of your health care professional.
- CytoDerma™ may stain clothing if not completely dry.

For external use only. If irritation occurs, discontinue use and consult your health care professional. Keep out of reach of children. Store at room temperature (15-30°C / 59-86°F). Do not use after expiration (EXP) date printed on the tube.

Ingredients: 100% Silicone

Recommended duration of treatment: Continue to use CytoDerma™ until no further improvement is seen or as directed by your health care professional.
